#### **General Instructions**

The FX Timberwolf must be fitted with a scope or alternate optic sights before use. Before using your rifle, read and abide by the basic safety rules.

#### The Basic Safety Rules:

- 1. Treat every rifle as if it is loaded.
- 2. Never point the rifle at anyone, or allow anyone to point a rifle at you, even if you know it is not loaded.
- 3. Always carry the rifle so that the direction of the muzzle is under control, even if you stumble.
- 4. Always be sure of your target and what lies behind it before firing your rifle.
- 5. Never leave a loaded rifle unattended.
- 6. Beware of targets that tend to cause ricochets.

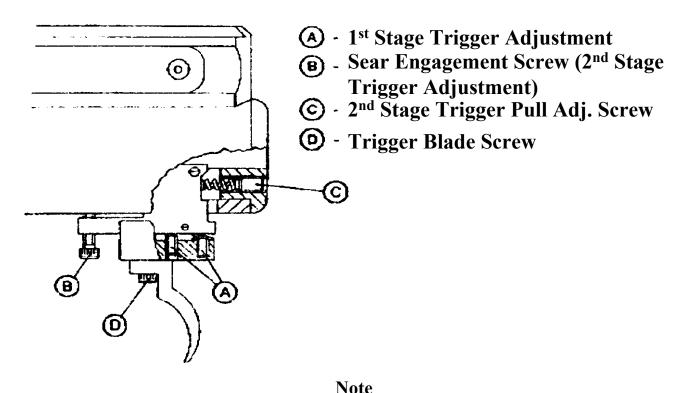

#### **Operating Instructions**

#### **Charging the Rifle**

Insert the nozzle of the fill hose into the rifle's fill hole located in the end plug at the muzzle end of the rifle, after making sure the hole is clear of dirt. Charge the rifle to its optimal range, without exceeding 200 BAR.

\*Undo the bleeder valve on the hose before disconnecting the fill nozzle from the rifle.

#### Trigger Mechanism Adjustment

- 1. Before making any adjustments to the trigger mechanism, make sure the magazine is removed and the barrel is not loaded with a pellet.
- 2. If the sear engagement screw is adjusted, make sure to leave enough sear engagement with the hammer to ensure safe operation of the rifle.
- 3. Test fire the rifle before replacing a loaded magazine.

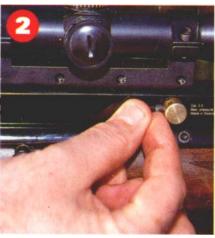

#### **Adjusting the Power**

To adjust the power, remove the stock and locate the air transfer port restrictor screw, located on the right-hand side of the cylinder. Turn the restrictor screw counter-clockwise to increase the velocity and clockwise to reduce the velocity. Once the adjustments are complete, blue Loctite may be applied to the air transfer port restrictor screw.

#### **Step-By-Step Loading Instructions**

Draw back cocking bolt fully and push sliding magazine to right-hand side.

Place a pellet in magazine port and release magazine.

Seat the pellet into the bore by pushing the bolt forward, then draw back the bolt once again.

Push magazine to the right and insert a second pellet.

With magazine STILL PUSHED FIRMLY TO THE RIGHT, close the bolt.

The Timberwolf is now ready to fire two shots as fast as you can cycle the bolt!

NOTE: FAILURE TO OBSERVE STEP 5 WILL RESULT IN TWO PELLETS BEING LOADED AT THE SAME TIME!

#### **Maintenance**

#### **WARNING!**

Never attempt to strip this rifle while it is partially or fully charged. Failure to obey this instruction can result in serious injury and/or damage.

If the rifle develops a defect within the warranty period, contact the dealer from whom it was purchased. The guarantee does not cover any damage caused by tampering with the rifle.

This rifle should only be disassembled by factoryauthorized repairmen, or by a competent gunsmith.

#### Lubrication

Do not apply lubrication to the air filler nozzle or the air filler hole on the rifle.

Apply proper mineral based oils occasionally to the following parts:

- 1. The trigger mechanism
- 2. The bolt slot shroud
- 3. The stem of the hammer assembly

Do Not Over-Lubricate the Rifle

#### **Bolt Positions**

To cock the rifle, lift the bolt and pull back to the rear position. This sets the trigger. Returning the bolt to the forward position loads a pellet and makes the rifle ready to fire. The rear slot serves as a safety and dry fire position. Rifle is fully disabled with bolt up and back. To cycle the magazine, slide bolt from forward to rear position. Use Caution To Avoid Loading More Than One Pellet.

#### "O" Ring Maintenance

#### **Quick Fill Nozzle "O" Rings Replacement**

After a period of time, the "O" rings on the fill nozzle will need to be replaced. The need for this will become noticeable if air is heard leaking from the nozzle while charging the rifle. Always be sure to replace both "O" rings.
